Summary

Master's graduate in Clinical Bioinformatics, I combine scientific knowledge with hands-on programming experience in Python and R to analyze complex datasets and develop data-driven solutions. Interested in data analytics, dashboard development, and transforming data into actionable insights to support strategic decision-making and business performance improvement.

Experience

- | | |
|---|--|
| <p>Scientific ToolBox Consulting, Intern in Clinical Data Management and Statistical Programming</p> <ul style="list-style-type: none"> Developed a risk-based validation plan for the implementation of a controlled R environment in a Contract Research Organization (CRO). Performed risk assessments and prepared validation and governance documentation to support regulatory compliance. Defined procedures for package management, reproducibility, and version control using R, <i>renv</i>, and Docker. Designed electronic Case Report Forms (eCRFs) and study workflows in Viedoc Designer to support the implementation of a medical device clinical trial. Applied ICH Good Clinical Practice (GCP) principles and GMP expectations for computerized systems while contributing to validation and clinical data management activities. | <p>Remote - Lisbon
Nov 2025 – June 2026
8 months</p> |
| <p>Scientific Junior Value, Member of the Human Resources Department</p> <ul style="list-style-type: none"> Collaborated with multidisciplinary teams contributing to project planning, execution, and client communication. | <p>Aveiro
Apr 2025 – Oct 2025
7 months</p> |

Education

- | | |
|---|------------------------------|
| <p>MSc University of Aveiro, Clinical Bioinformatics - Specialization in Clinical Decision Support</p> <ul style="list-style-type: none"> Contributed to the design of the application workflow and decision logic for a clinical decision support tool for Chronic Obstructive Pulmonary Disease (COPD), developed in R. | <p>Oct 2024 – July 2026</p> |
| <p>BSc University of Aveiro, Biotechnology</p> <ul style="list-style-type: none"> Developed 3D biopolymer-based structures incorporating metallic nanoparticles for water disinfection applications, combining biomaterials research and experimental characterization techniques. | <p>Sept 2021 – June 2024</p> |

Projects

- | | |
|---|-----------------|
| <p>Clinical Trial Screening Tool</p> <p>A Python command-line tool that screens clinical trial participants against a study protocol's inclusion and exclusion criteria, and generates an eligibility report for each one.</p> | <p>Aug 2026</p> |
| <p>Clinical Data Validation Tool</p> <p>A configurable data validation and quality control tool for clinical trial datasets, built with Python and Streamlit. Upload a dataset, validate it against a set of clinical data rules, review the results, and keep an audit trail of every validation run.</p> | <p>Aug 2026</p> |

Skills

Data Analytics & Programming: Python, R, SQL, Statistical Analysis, Data Visualization, Data Processing

Software & Tools: Microsoft Office, Git, AI tools

Languages: Portuguese (native), English

Certification & Training

IBM SkillsBuild

July 2026

- AI Fundamentals: Foundations for Understanding AI

Global Health Training Centre

Jan 2026

- Good Clinical Practice (GCP) Certification – ICH E6(R3)

SAS Institute

Nov 2025 – Dec 2025

- SAS Programming 1: Essentials
- Introduction to Statistical Concepts
- Statistics 1: Introduction to ANOVA, Regression, and Logistic Regression
